Bulletin T-19

October 1982

FOREWORD

Tennessee and American farmers continue to struggle to receive a fair return for the goods they produce. U. S. farm income statistics for 1981 clearly illustrate the cost price squeeze farmers have experienced. Cash receipts from farm marketings rose only 3 percent last year while cash production costs rose nearly 9 percent. As a result, net cash farm income declined 12 percent from 1980 and was 15 percent below 1979.

The market economy can only function efficiently if information is available to agricultural producers and marketers. That is why the crop and livestock estimating work was started over 100 years ago and remains so important today.

The importance of farming in Tennessee is summarized in this publication and made available to all those interested in Tennessee agriculture through the cooperative agreement of the Tennessee Department of Agriculture and U.S.D.A. Statistical Reporting Service.

This annual statistics bulletin is the 19th in a series that began in 1963. It has been an extremely popular publication, and we try to continually improve the format and content of the bulletin to make it even more useful to data users.

This year, in addition to data series previously carried, we have added data on exports, fertilizer, county rankings, weather summary, and have provided narrative summaries for the major crops and livestock. Suggestions for further improvements are always welcomed.

I wish to acknowledge the valuable assistance of the many Tennessee farmers and agribusinesses who voluntarily provide the raw data from which the official estimates are established. A special thank you also goes to the Tennessee Agricultural Extension Service for providing the summaries of Livestock Market News reports.

I would also like to thank the Soil Conservation Service and the Agriculture Stabilization and Conservation Service for the photos used in this publication. I believe they contribute substantially in portraying Tennessee agriculture.

I want to publicly thank everyone in our office for their input into this bulletin, and especially Serial Kenerson who took on the task of redesigning and compiling the bulletin.

Robert Murphy, Statistician in Charge

TENNESSEE DEPARTMENT OF AGRICULTURE

WILLIAM H. WALKER III
Commissioner

September 15, 1982

Dear Reader:

In recent years, farmers have experienced increasing expenses and low prices for the products of their labor. On top of that, agriculture becomes more dynamic and complex every season. The years ahead promise new technical developments and a highly competitive agricultural industry. Accurate agricultural statistics will continue to be the basis for actions the farm community needs to take to get ahead and stay ahead.

The statistical program which produces this report relies on voluntary cooperation which began over a century ago. I sincerely thank the many farmers and others who faithfully respond to the variety of surveys conducted by the Crop Reporting Service.

I hope that the statistics presented in this report will prove useful to everyone associated with the number one industry in Tennessee.

Sincerely,

William H. Walker III

ANNUAL BULLETIN - 1982

TABLE OF CONTENTS

MAJOR FIELD CROPS

Crop-Weather Highlights 1-2
Usual Planting and Harvesting Dates 3
Crop Summary and Production Index 4
Crop Ranking in U. S. 5
Soybeans, Including Plant Population, State and County 6-9
Tobacco, State and County 10-13
Wheat, State and County 14-17
Corn, State and County 18-21
Cotton, State and County. 22-24

OTHER FIELD CROPS

Highlights. 25
Sorghum, State 26
Hay, by Kinds, State 26
Hay Stocks, State 26
Oats, State 27
Irish Potatoes, State 27
Sweet Potatoes, State 27
Grain Stocks, by Quarter, State 28-29

FRUITS AND VEGETABLES

Highlights 30
Apples, State 30
Peaches, State 30
Cabbage, Fresh Market, State 31
Snap Beans, Fresh Market and Processing, State 31
Tomatoes, Fresh Market, State 31
Usual Planting and Harvesting Dates 32

SEED CROPS

Highlights 33
Lespedeza Seed 33
Tall Fescue Seed 33

FLORICULTURE, State 34

LIVESTOCK

Highlights 36
Livestock, Inventory and Value 37
Livestock and Poultry Summary 37
Cattle Cycle, State 38
Hogs and Pigs, Spring and Fall. 38
Meat Animals, Production and Income 39
Livestock Slaughter 40
Livestock and Poultry Farms 41
Livestock Ranking in U.S. 41
Honey and Beeswax, Production and Value 41
Cattle and Calves, State and County 42-43
Beef Cattle, State and County 44-45
Hogs and Pigs, State and County 46-47
Hogs and Pigs for Breeding, State and County 48-49
All Chickens, Inventory, Production and Income, State 50
Egg Production and Income, Layer Numbers 51
Broilers, Production and Income 51
Sheep and Lambs, Inventory, Production and Income, State. 52-53
Wool, Production and Income 53

DAIRY

Highlights. 55
Milk Cow Numbers, Monthly 55
Milk Cows, State and County 56-57
Milk Production, Monthly 58
Milk, Production and Income, State 59
Milk Products, Monthly. 60-61

FARM INCOME

Highlights 63
Cash Receipts, from Farm Marketings, State 64-65
Field Crops, Production, Farm Use, Sales, and Value 66-67
Cotton, Production, Disposition, and Value 68
Prices Received for Farm Products, Monthly 69-75
Crop Values, By Major Group, Tennessee, 1970-81 75
Index of Prices Received, Crops, Livestock and all Farm Products, Monthly 76-78
Farm Income 79

COST OF PRODUCTION

Highlights 81
Farm Expenses 81
Prices Paid for Feed 82
Prices Paid for Farm Production Items 83-85

MISCELLEANOUS

Farms and Land in Farms 87
Value and Cash Rent of Farm Real Estate 88
Fertilizer. 89
Foreign Agricultural Trade, Tennessee and U.S.. 90-91

Number and Prices of Livestock Sold at Selected Auctions 92-97

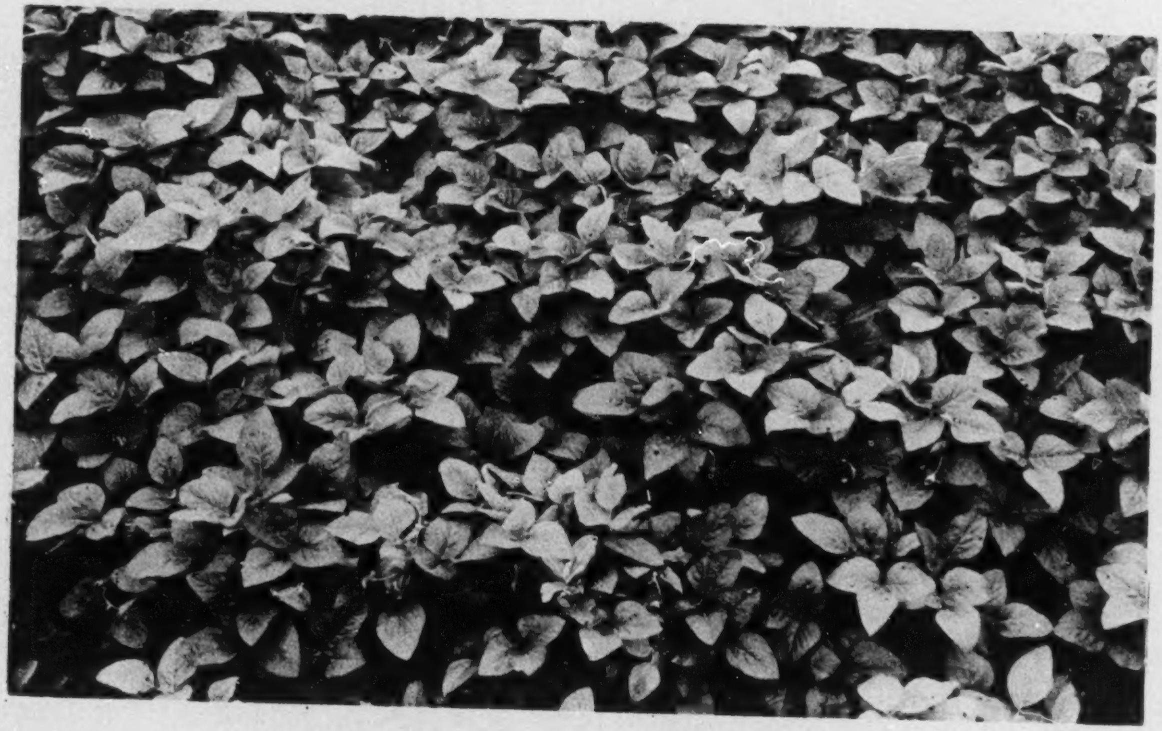
CROPS



1981 WEATHER SUMMARY

The 1981 Weather Summary is based on statistics from the Climatological Data Annual Summary for the State of Tennessee. The State is divided into four climatological divisions: Eastern, Cumberland Plateau, Middle and Western. Temperature and precipitation averages for these four divisions will be referred to in the following summary. Normals for all Division are climatological normals based on the period 1941-1970.

Temperatures and precipitation during 1981 averaged below normal throughout the State. Temperature averages ranged from .8 degrees below normal in the Western Division to 1.7 degrees below normal in the Eastern and Middle Divisions. Precipitation for the year averaged from 2.80 inches below normal in Eastern Tennessee to 5.64 inches below normal in the Western Division.

January: January was a cold, dry month with both temperatures and precipitation below normal. Temperature averages ranged from 3.9 degrees below normal in the Western Division to 6.4 degrees below normal in the Cumberland Plateau. Precipitation averaged from 3.12 inches below normal in the Eastern Division to 3.71 inches below normal in the Cumberland Plateau.

February: Temperature averages were slightly below to near normal for the month while precipitation averaged slightly below normal. Temperatures ranged from normal in the Western Division to 1.3 degrees below normal in the East. Precipitation averaged from .34 inches below normal in the Eastern Division to 1.64 inches below normal in the Cumberland Plateau.

March: Temperature and precipitation averages were below normal during the month. Temperature averages ranged from 1 degree below normal in the Western Division to 3.5 degrees below normal in the Eastern Division. Precipitation averaged .67 inches below normal in the West to 1.90 inches below normal in the East. Soil moisture levels were short during most of the month but rainfall received the end of the month helped to improve moisture conditions.

April: Temperatures averaged above normal during April, ranging from 3.3 degrees above normal in the Eastern Division to 4.8 degrees above normal in the Western Division. Precipitation was below normal in the Middle and Western Divisions but slightly above normal in the Eastern and Cumberland Plateau Divisions. Ranges were 1.63 inches below normal in the Western Division to .78 inches above normal in the Eastern Division. Soil moisture levels were mostly short to adequate during the month with moisture conditions improving towards the end of the month.

May: Temperatures averaged below normal during the month with averages ranging from 4.1 degrees below normal in the Cumberland Plateau Division to 4.6 degrees below normal in the Middle Division. Precipitation averaged slightly below normal in the Cumberland Plateau and Middle Divisions but was slightly above normal in the Eastern and Western Divisions. Ranges were .44 inches below normal in the Middle Division to 1.10 inches above normal in the Western Division. Soil moisture levels were mostly adequate during the month.

June: Temperatures and precipitation averaged above normal during June. Temperatures ranged from .9 degrees above normal in the Middle Division to 2.2 degrees above normal in the Cumberland Plateau. Precipitation averages ranged from .88 inches above normal in the Cumberland Plateau Division to 2.17 inches above normal in the Western Division. Soil moisture levels were generally surplus the first half of the month but declined to adequate during the last half.

July: Temperatures averaged slightly above normal for the month while precipitation averaged above normal in the Middle and Western Divisions but below normal in the Eastern and Cumberland Plateau Divisions. Temperatures ranged from .1 degree above normal in the Middle Division to 1.6 degrees above normal in the Cumberland Plateau. Precipitation ranged from .61 inches below normal in the Eastern Division to 1.97 inches above normal in the Middle Division. Soil moisture was rated adequate throughout the month.

August: Temperatures averaged below normal for the month while precipitation was near normal. Temperatures ranged from 1.2 degrees below normal in the Eastern Division to 2.1 degrees below normal in the Middle Division. Precipitation was slightly below normal in the Eastern and Western Divisions but slightly above normal in the Middle and Cumberland Plateau Divisions. Ranges were .21 inches below normal in the Eastern Division to .94 inches above normal in the Cumberland Plateau. Soil moisture was adequate during most of the month.

September: Temperatures averaged below normal for the month while precipitation was slightly below normal except in the Eastern Division. Temperatures ranged from 2.8 degrees below normal in the Western and Cumberland Plateau Divisions to 3.7 degrees below normal in the Middle Division. Precipitation ranged from 1.11 inches below normal in the Western Division to .65 inches above normal in the Eastern Division.

October: Temperatures averaged below normal for the third month in a row. Precipitation was above normal throughout the State. Temperatures ranged from 2.1 degrees below normal in the Cumberland Plateau division to 3.3 degrees below normal in the Eastern Division. Precipitation ranged from 1.01 inches above normal in the Eastern Division to 2.59 inches above normal in the Cumberland Plateau. Soil moisture was rated mostly short the first of the month but increased to adequate the last half of the month.

November: Temperatures averaged above normal during November while precipitation averaged below normal for the month. Temperatures ranged from .1 degree above normal in the Eastern Division to 2.3 degrees above normal in the Western Division. Precipitation ranged from .39 inches below normal in the Cumberland Plateau to 2.12 inches below normal in the Western Division. Soil moisture was mostly adequate during the month.

December: Temperatures and precipitation averaged below normal for the month. Temperatures ranged from 2.8 degrees below normal in the Western Division to 3.5 degrees below normal in the Eastern and Middle Divisions. Precipitation ranged from .30 inches below normal in the Eastern Division to 2.04 inches below normal in the Cumberland Plateau.

TOP FIVE COUNTIES

1.	DYER	- 5,480,000 BU.
2.	OBION	- 4,555,000 BU.
3.	GIBSON	- 4,529,000 BU.
4.	TIPTON	- 3,220,000 BU.
5.	LAUDERDALE	- 2,840,000 BU.

Soybean planting began around May 1 as warm, dry weather throughout the State allowed farmers to make excellent progress during the first half of May. Heavy rains from mid-May through mid-June in many parts of the State decreased planting progress significantly as farmers fell as much as 17 days behind the ten-year average progress, but much needed sunshine across most of the State during late June and early July enabled farmers to finish planting on schedule.

Although nearly half of the soybean crop was planted during late June and early July, overall development progressed well. Blooming was slow until the first part of August, but timely rains from mid to late August accelerated growth. By late August, all the acreage had bloomed, about two weeks ahead of average. Soybeans setting pods also got off to a slow start due to the late planting of the crop but advanced ahead of the average in late August. Shedding of leaves lagged behind the average the entire season and finished about 3 days behind normal. Fair to good growing conditions during the maturing stage enabled the crop to mature ahead of normal.

Harvesting of soybeans got underway by late September. Steady rains during late October slowed harvesting but excellent weather from mid to late November allowed farmers to complete harvesting well ahead of the average. Soybeans harvested in the State totaled 2,350,000 acres, down 8 percent from 1980. Yield averaged 26 bushels per acre, up 8 bushels per acre from 1980's drought-stricken crop and the second highest yield on record. Production of soybeans at 61,100,000 bushels was up 33 percent from the previous year and ranks second to 1979's record high crop.

SOYBEANS: ACREAGE, YIELD, AND PRODUCTION TENNESSEE, 1975 — 81

Year	Acres		Yield	Production
	Planted	Harvested	Per Acre	
	1,000		Bu.	1,000 Bu.
1975	1,950	1,850	25.0	46,250
1976	1,920	1,800	22.5	40,500
1977	2,320	2,220	23.5	52,170
1978	2,530	2,420	23.5	56,870
1979	2,700	2,620	27.0	70,740
1980	2,650	2,550	18.0	45,900
1981	2,450	2,350	26.0	61,100

The average row width of soybeans in Tennessee averaged 30.0 inches, 1.9 inches less than the previous year. The most popular row width was 34.6 inches and greater, with 49 percent of the sample plots in that range. The three leading soybean varieties by percent of acreage harvested were: Bedford, 31.9 percent; Forrest, 26.3 percent; and Essex, 24.4 percent.

MEASURED ROW SPACING OF SOYBEANS: PERCENTAGE DISTRIBUTION AND AVERAGE WIDTH TENNESSEE, 1978–81 1/

Year	Number of Samples	Row Width Groups (Inches)					Average Width 2/ (Inches)
		10.0 & Less 2/	10.1-18.5	18.6-28.5	28.6-34.5	34.6 & Greater	
		Percent of Plots					
1978	88	10.2	4.5	2.3	10.2	72.8	35.5
1979	82	10.4	6.7	8.5	14.0	60.4	33.0
1980	82	16.5	5.5	9.1	12.8	56.1	31.9
1981	79	18.4	10.1	11.4	10.8	49.3	30.0

1/ Based on row measurements in plots selected for objective yield samples.
2/ Broadcast soybeans included as 10.0 inches and less but excluded in computation of average width.

Farmers took advantage of excellent weather conditions during March through mid-April to complete seedbed preparation about a week ahead of normal. With an early start to begin transplanting and an abundant supply of tobacco plants available, farmers were able to complete transplanting slightly ahead of normal despite heavy rains in early June causing some fields to be reset. In fields treated, damage from blue mold, black shank, budworms, hornworms, and other common pest were minimal.

Scattered rains during the most of July across the State enhanced crop development. Topping of the crop started in early July, much earlier than normal. Harvesting also got off to a quick start as growers began cutting tobacco in early August and finishing up during early October. Some early harvested tobacco was being stripped in late September.

Tennessee farmers harvested 78,650 acres of tobacco in 1981, up 21 percent from the previous year and the largest number of acres harvested since 1963. Yield per acre averaged 2,053 pounds per acre compared with 1,728 pounds per acre in 1980. Growers harvested a whopping 161,463,000 pounds of tobacco, a 44 percent increase from the previous year and the third largest crop on record. Burley production totaled a record high 140,075,000 pounds, up 56 percent from 1980 and accounted for 87 percent of the total.

ALL TOBACCO: ACREAGE, YIELD, PRODUCTION, AND VALUE TENNESSEE, 1975 – 81

Fall seeding of the 1981 wheat crop began around mid-September as soil moisture levels remained mostly short from drought conditions. Despite the prolonged lack of adequate soil moisture, the crop emerged on schedule and rated in fair to good condition. Wheat began heading around the first of April and progressed rapidly as welcome rains provided the crop with needed moisture. The crop began ripening during late May with most stands in good condition. Combining of wheat followed in early June, after a short delay due to wet fields, and was completed by mid-July.

Tennessee farmers harvested 850,000 acres of wheat in 1981, up 89 percent from the previous year and the largest amount since 1906 when 1,000,000 acres were harvested. Yield per acre averaged a record high 44 bushels, compared with the previous record high of 38 bushels per acre established in 1980. Production totaled 37,400,000 bushels, a whopping 119 percent above the 1980 crop which was the largest in the State's history.

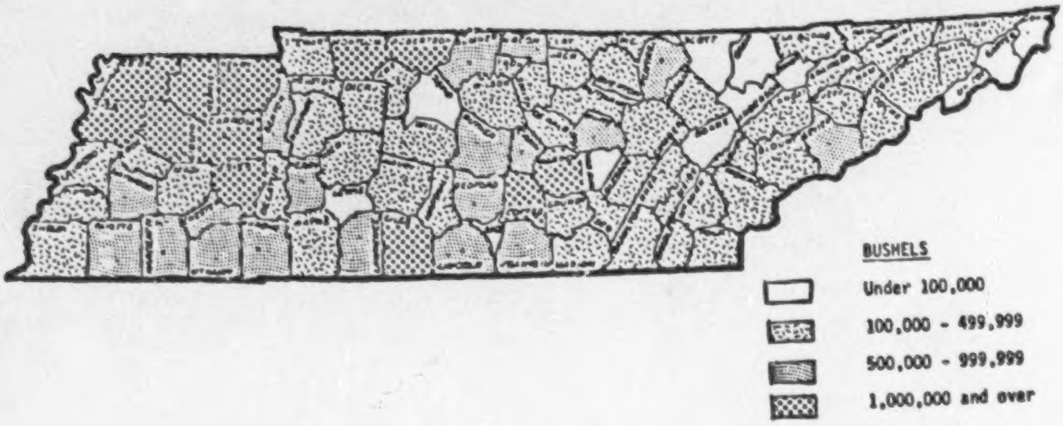
CORN FOR GRAIN

1981 PRODUCTION



Late March and early April ideal weather conditions permitted farmers to begin planting of the 1981 corn crop at an average 5 days per week. Cooler than normal temperatures during a short period in May hindered plant growth and some replanting in scattered areas was necessary; however, needed rain showers and overall good field conditions during May enhanced soil moisture levels, crop development, and planting progress. Planting was completed in early June, about 10 days ahead of schedule. Corn began to silk around mid-June and was rated in good condition. Spraying for fall armyworms and other destructive insects on late planted fields was necessary.

Corn advanced exceptionally well through the dough and dent stages with no major problems developing. The crop began to mature around the first of August and grain harvest got underway the latter part of August. By the end of November, farmers had harvested 640,000 acres of corn for grain, unchanged from the previous year's level, but 3 percent higher than 1979. Yield per acre averaged a record high of 86 bushels, up 40 bushels per acre from 1980's drought reduced crop and 1 bushel more than

CORN: ALL CORN ACREAGE PLANTED AND ACREAGE, YIELD AND PRODUCTION OF CORN FOR GRAIN, TENNESSEE, 1975-81

Year	All Corn Planted	Corn for Grain		
		Harvested	Yield Per Acre	Production
	1,000 Acres		Bushels	1,000 Bu.
1975	780	615	60.0	36,900
1976	890	715	82.0	58,630
1977	900	730	68.0	49,640
1978	820	660	69.0	45,540
1979	750	620	85.0	52,700
1980	810	640	46.0	29,440
1981	770	640	86.0	55,040

the previous record high set in 1979. Production of corn for grain totaled 55,040,000 bushels, up 87 percent from the previous year and the largest crop since 1976. Corn for silage was cut from 118,000 acres, down 32,000 acres (21 percent) from the previous year. Yield per acre averaged 16.5 tons, up 5 tons per acre from the previous year and equaled 1979's record high. Silage production totaled 1,947,000 tons, up 13 percent from 1980.

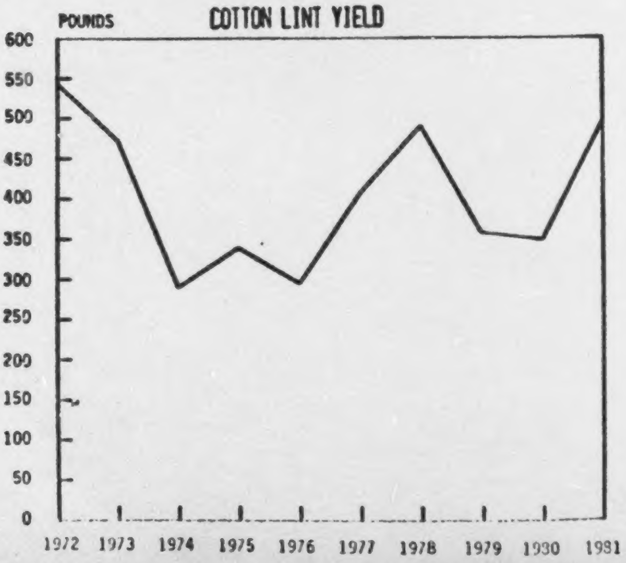
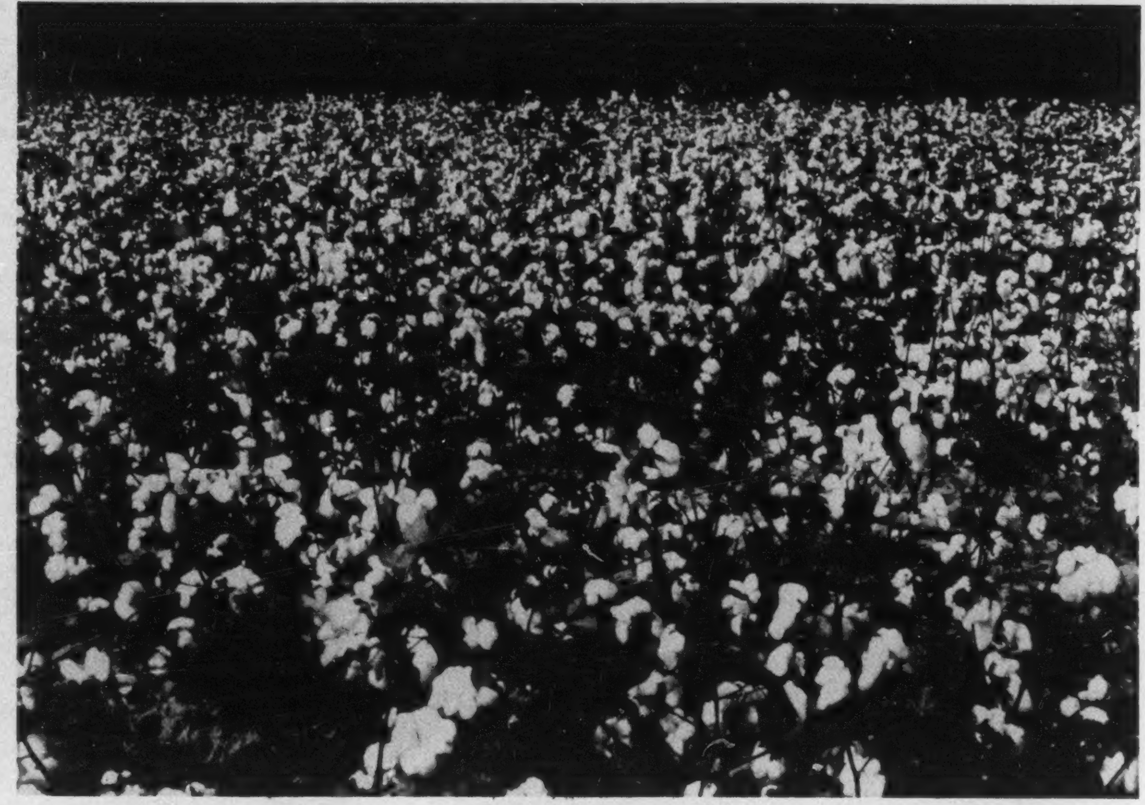
Planting of the 1981 cotton crop began during early April and progressed rapidly during the planting season. Heavy rainfall across most of the State during late May through early June caused periods of flooding along with widespread weed and grass infestation. Some replanting was necessary due to crusting of soil and cold injury; however, planting of the cotton crop was completed ahead of normal.

In the early stages of development, thrip damage, seedling diseases, and cool and wet weather somewhat deteriorated crop conditions; however, growing conditions improved in late July as much needed sunshine prevailed. By late July, the crop had squarred more than a week ahead of average and rated in good condition. Bolls began opening during mid-August and by late September, harvesting was underway. Picking of the crop progressed ahead of average and was completed around the first of December. Adult boll weevils in hibernation was reported extremely high in Lincoln county.





Ginning of the 1981 cotton crop was finished around mid-January and totaled 315,000 bales, up 115,000 bales from a year earlier and the largest crop since 1973. The 1981 crop was harvested from 305,000 acres averaging 496 pounds of lint cotton per acre, the highest yield since the 1972 average of 543 pounds per acre. The 1980 crop was harvested from 275,000 acres and averaged 349 pounds of lint cotton per acre.

COTTON: ACREAGE, YIELD, AND PRODUCTION, 1975-1981

Year	Acreage		Lint Yield: Per Harv Acre	Production		Ginnings as Reported by Census

OTHER FIELD CROPS

Sorghum for grain was harvested from 67,000 acres in 1981 with a production of 3,752,000 bushels. This was 91 and 155 percent, respectively, above 1980 and ranked second to the record high established in 1971. Yield per acre reached a record high, averaging 56 bushels per acre compared with 42 bushels the previous year. The crop was valued at $8,179,000, also a record high. All hay production in the State totaled 2,078,000 tons, up 18 percent from the previous year and the largest crop since 1949. Yield per acre averaged 1.64 tons, compared with 1.49 tons the year earlier. Carry-over of the 1980 drought reduced crop into 1981 was low and resulted in January 1 on farms stocks of only 1,305,000 tons, down 21 percent from the same period a year earlier and the smallest amount since 1977. The May 1 stocks of 335,000 tons dropped 41 percent from its 1980 total of 556,000 tons. Oat production totaled 816,000 bushels, up 48 percent from the previous year and the largest crop since 1976. Yield per acre averaged a record high of 51 bushels, up 5 bushels per acre from the year earlier and 10 bushels more than the 1980 crop. The crop was harvested from 16,000 acres and valued at $1,958,000. Production of Irish Potatoes totaled 279,000 cwt., up 42 percent from the previous year. The average price received was a record high of $9.80 per cwt. Sweet Potato production amounted to 144,00 cwt., down 10 percent from 1980 and ranked second to the record low of 140,000 cwt. produced in 1977. The season average price of $15.30 per cwt. was the highest on record.

FRUIT AND VEGETABLES

Excellent growing conditions during 1981 provided Tennessee farmers with an abundant fruit and vegetable crop. Apple production totaled 11,000,000 pounds, up 3,000,000 pounds from 1980 and the largest crop since 1964's production of 15,100,000 pounds. The crop was valued at $1,650,000, up 40 percent from the previous year and dates back to 1937 as the highest valued crop. The returns from the peach crop were also welcomed. Production having value totaled 9,500,000 pounds and averaged a record high of 18.5 cents per pound. The most recent crop to surpass 1981's crop value of $1,758,000 dates back to 1937.

Cabbage for fresh market was harvested from 410 acres during 1981, down 340 acres from the previous year and represents the smallest amount of acreage cut for fresh market since records began in 1955. Yield per acre doubled 1980's poor crop and averaged a record high of 270 cwt. The record yield pushed production to 111,000 cwt., compared with 101,000 cwt. the previous year. The crop was valued at $1,021,000 and average price was $9.20 per cwt. Production of snapbeans for fresh market and processing totaled 467,000 cwt., up 158,000 cwt. from a year earlier and the largest crop since 1975. Snapbeans for processing represented 83 percent of total production and was valued at a record high of $6,445,000. Tomato production for fresh market totaled a record high of 516,000 cwt., up 27 percent from the previous year. The crop was harvested from 4,300 acres and averaged 120 cwt. per acre. Value was a record high of $12,126,000.

SEED CROPS

Lespedeza seed production in the State totaled 1,400,000 pounds, up 315,000 pounds from the previous year but 535,000 pounds less than 1980's production. The yield per acre averaged 200 pounds, compared with 155 pounds per acre in 1980. The crop was harvested from 7,000 acres, unchanged from the previous year but ranks with 1974 and 1980 as the smallest acreage harvested on record. The crop was valued at $756,000, compared with $684,000 for the 1980 crop. The season average price of $54.00 per cwt. dropped $9.00 per cwt. from the previous year.

Tall Fescue seed production in Tennessee totaled 2,375,000 pounds, up 175,000 pounds from the prior year, but 25,000 pounds short of 1979's total. Farmers harvested 12,500 acres for seed, up 1,500 acres from a year earlier and 2,500 acres more than 1979. An average yield of 190 pounds per acre was realized in 1981, down 10 and 50 pounds, respectively, from their 1980 and 1979 level. The crop averaged $36.00 per cwt., up $9.50 per cwt. from the year earlier, and the highest price received since 1951's average price of $51.00 per cwt. Value of the crop increased $272,000 from 1980 to $855,000 in 1981.

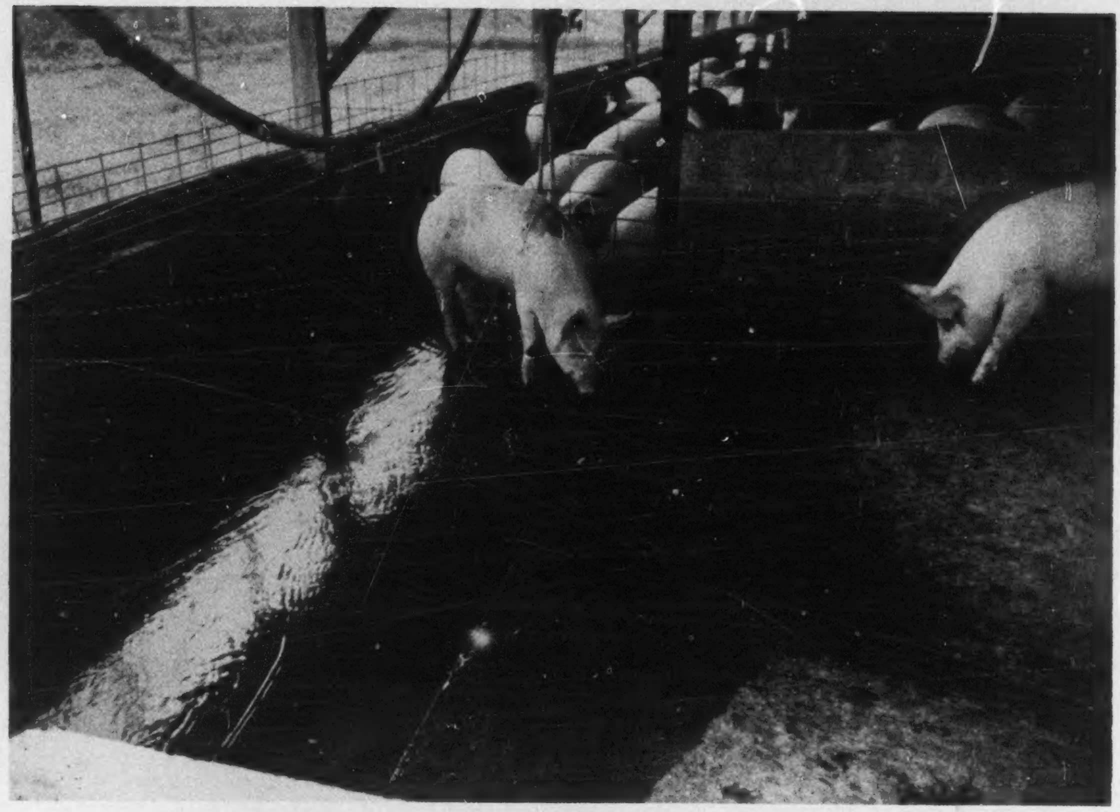
1/ Number of growers with sales over $10,000. 2/ Equivalent wholesale value of all sales. 3/ Does not include "open acreage" of vegetable transplants grown outside for use in commercial vegetable production. 4/ Flats sold instead of pots sold; flats sold in thousand flats. 5/ Blooms sold instead of pots sold; blooms sold in thousand blooms.

LIVESTOCK



TENNESSEE'S LIVESTOCK PRODUCERS EXPERIENCE GLOOMY YEAR

Tennessee's livestock and poultry producers found little to cheer about in 1981. Gross income from livestock and poultry suffered as a result of low prices for cattle, fewer numbers of hogs, fewer sheep and fewer chickens when compared with 1980. The farm value of livestock and poultry on hand January 1, 1982 declined by 11 percent from one year earlier. Sluggish markets coupled with high production costs created a rather dismall situation for Tennessee livestock producers in 1981.

It appears that the current cattle cycle which began in 1980 is following a pattern similar to the previous cycle (1970-1980). The rebuilding phase of the cycle normally requires 6 or 7 years, so peak cattle numbers may still be several years away. This is the first cycle since the turn of the century that did not start at a point well above the previous cycle.

The number of cattle and calves on Tennessee farms as of January 1, 1982 was 2.5 million, 6 percent more than the 2.3 million head of a year earlier and 9 percent above the January 1, 1980 total. Gross income from cattle and calves during 1981 was 21 percent less than in 1980 and the lowest since 1975. Lower prices more than offset the increase in production from a year ago.

One of the few bright spots in the State's livestock industry during 1981 was in the dairy business. Tennessee dairymen produced a record high 2.3 billion pounds of milk, 55 million pounds more than the previous high of a year earlier. The price of milk to plants and dealers averaged $13.90 per hundredweight, $.60 more than in 1980. Cash receipts from milk marketings in 1981 amounted to a record high $307.8 million. The only agricultural commodity in Tennessee with more cash receipts than milk in 1981 was soybeans.

Tennessee hog producers saw prices improve in 1981, but not enough to offset the decline in numbers. Hogs in Tennessee on December 1, 1981 totaled 900,000 head, 21 percent less than a year earlier and the lowest total for December 1 since 1974. Records dating back to 1867 show only three times when year-end inventory numbers were less than 900,000. These were 1954 with 874,000 hogs and pigs, 1966 with 830,000 head and 1974 with 880,000 head. Gross income from hogs and pigs was the lowest since 1977.

Sheep production in Tennessee is almost a thing of the past. When records were started in the late 1800's, there were almost a million sheep in Tennessee. On January 1, 1982, the number of sheep and lambs on hand in the State totaled 10,000 head, the lowest on record. There is some renewed interest in sheep production which may stop or delay the steady decline in sheep numbers. Gross income from sheep and lambs was the lowest since 1978.

Poultrymen in Tennessee had 4,500,000 chickens, excluding commercial broilers, on hand January 1, 1982. This is 21 percent less than a year earlier and the lowest inventory on record. Commercial broiler production for 1981 totaled 64,521,000 head, down 4 percent from 1980, but 12 percent more than in 1979.

1981	76	9.8	27	.450	10.0

TENNESSEE'S RANK AMONG STATES IN LIVESTOCK INVENTORY, DECEMBER 1, 1981 AND JANUARY 1, 1982

Item	States Producing	Rank	Number
			1,000 Head
Hogs and Pigs 1/	50	14	900
All Cattle and Calves 2/	50	15	2,500
Milk Cows that have calved	50	13	215
Beef Cows that have calved	50	13	1,010
All Chickens 1/	50	24	4,500
Sheep and Lambs 2/	41	34	10

1/ December 1 previous year. 2/ January 1 current year.

Honey production in 1981 totaled 5.1 million pounds, 4 percent more than the 1980 crop of 4.9 million pounds. The number of colonies increased to 150,000, but yield per colony declined to 34 pounds from 35 pounds in 1980. The value of the 1981 crop was $4.7 million, 3 percent more than 1980 and 47 percent above 1979. The 1981 average price of 93.0 cents per pound for all honey sales was 1.0 cent below the 1980 average price. Beeswax production totaled 107,000 pounds, 9 percent more than the 1980 wax production of 98,000 pounds. The average price of beeswax at $1.85 per pound was 2.0 cents above the 1980 price and 44.0 cents above 1979.

DAIRY

1981 TENNESSEE DAIRY HIGHLIGHTS

Total milk production in Tennessee during 1981 was a record high 2.296 billion pounds, a gain of 55 million pounds (2.5 percent) from the previous record in 1980. The gain in production was due to the increase in milk per cow rather than increasing the number of cows. The annual average number of milk cows on Tennessee farms remained unchanged in 1981 from 1980 at 214,000 cows, following a gain of 1.4 percent in 1980. Milk cow replacement heifers on January 1, 1982 totaled 110,000 head, 10,000 more than a year earlier. This makes the ratio of replacement heifers to milk cows the highest ever at 51.16 heifers per 100 dairy farms.

The total number of operations with milk cows declined by about 200 in 1981. This 2 percent drop was the slowest decrease since 1974. Cash receipts from milk marketings in Tennessee during 1981 amounted to $307.8 million, a 7 percent increase since 1980 and a record high. This means that milk has increased in importance in Tennessee and is the second leading agricultural commodity in Tennessee. Soybeans remain number one, but cattle and calves slipped to number three. A record high 2.211 billion pounds of milk were marketed in 1981, 3 percent above 1980. Ninety-six percent of this milk was sold to plants and dealers. About 88 percent of all the milk sold to plants and dealers was eligible for the fluid market (Grade A). During 1981, the production decreased for: dry skim milk, ice cream, sherbet, ice milk, mixes for all frozen products, American cheese, and cottage cheese (curd and creamed). However, butter production was 15 percent larger than 1980. In relation to the remaining 49 states, in 1981 Tennessee ranked 13th in average milk cow numbers, 26th in average milk per cow and 14th in milk production. Among the 23 leading states producing American type cheese, Tennessee's 1981 production ranked 20th. Among the 21 butter producing states, Tennessee ranked 10th in 1981. Tennessee ranked 15th in total ice cream production among the 44 major producing states.

1981 MANUFACTURED DAIRY PRODUCTS

There are 14 fluid milk plants, 12 manufacturing, 11 ice cream, 3 butter, 7 cheese (including the only Swiss cheese plants in the South), an evaporated plant and a drying plant in Tennessee to process raw milk to be manufactured into various products. During 1981, the production decreased for: dry skim milk, ice cream, sherbet, ice milk, mixes for all frozen products, American cheese and cottage cheese (cured and creamed). However, butter production was 15 percent larger than in 1980.

Tennessee dairy farmers marketed more milk than ever before in 1981, 2.211 billion pounds, 3 percent above the previous high of 1980. Whole milk sold to plants and dealers accounted for 96 percent of the total milk produced. Milk eligible for the fluid market (Grade A) was 88 percent of all milk sold to plants and dealers, one percent less than 1980.

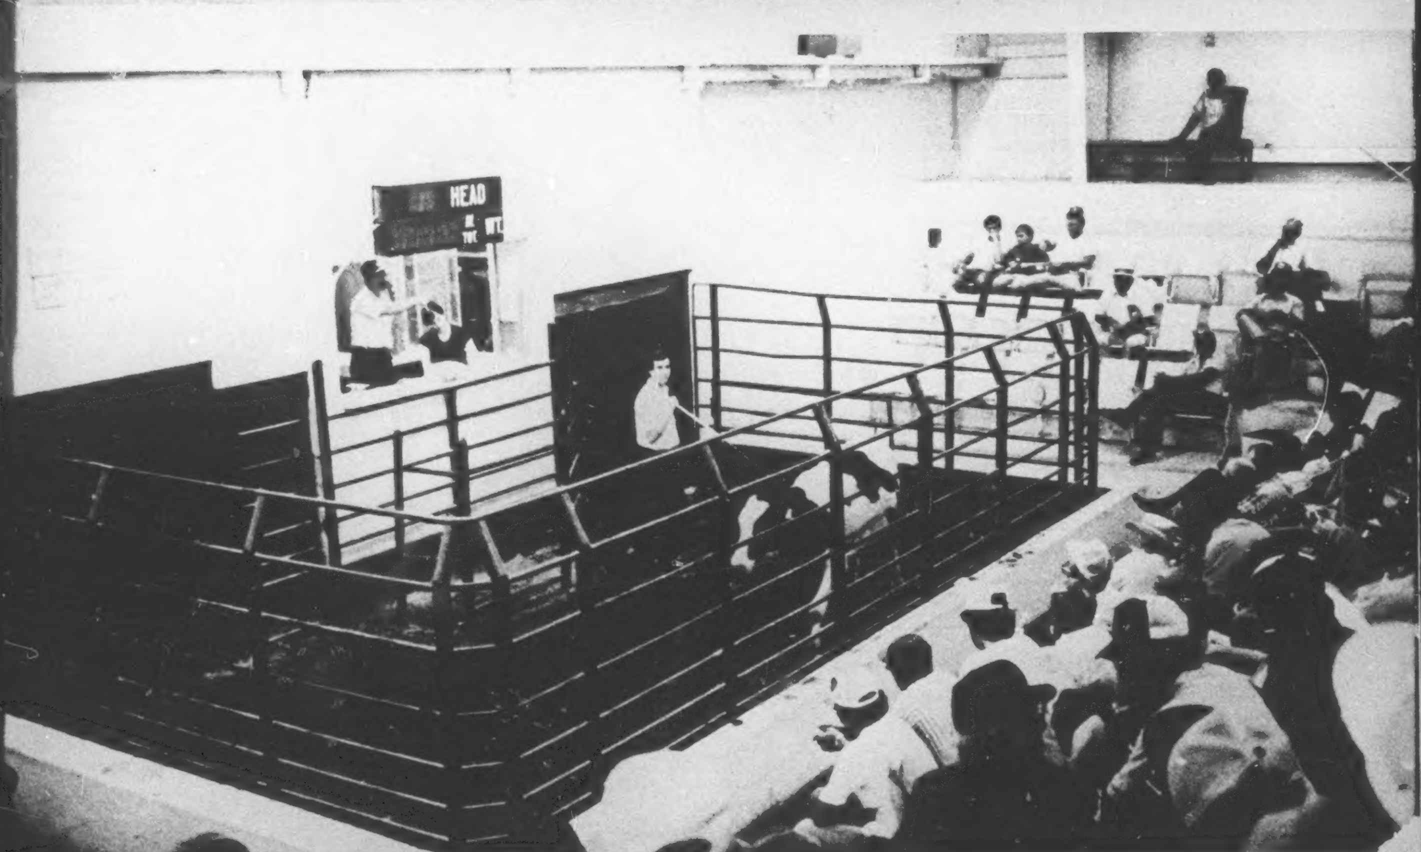
1/ Includes Cheddar, Colby, Washed Curd, Stirred Curd, Monterey and Jack.

FARM INCOME



FARM INCOME AND VALUE HIGHLIGHTS

Gross income from farming in Tennessee rose 5 percent in 1981 but production expenses rose 10 percent, resulting in a substantial decrease in realized net farm income. A large increase in farm inventory values resulted in a total net farm income in 1981 that was nearly 5 times higher than in 1980. The record large crops in 1981 still being held by farmers were responsible for the increase in inventories.

Cash Receipts

Cash receipts for all Tennessee commodities in 1981 totaled 1.84 billion dollars, up 4 percent from 1980. Crops cash receipts increased 16 percent from 1980 while receipts for livestock and products declined 7 percent. Soybean receipts accounted for nearly 19 percent of the total receipts, the largest percent of any commodity. Dairy products ranked second with about 17 percent of the total receipts.

Cash receipts for all crops totaled 54.3 percent of all receipts. Soybeans, cottonseed and greenhouse and nursery products were the only crop commodities to show a decrease in receipts from 1980. Wheat receipts more than doubled the 1980 receipts and accounted for the largest increase of any crop. Consequently, wheat replaced cotton as the third most important Tennessee crop. Soybean receipts showed the largest decrease by dropping 11 percent from 1980 but still accounted for about one-third of all crop receipts, the largest share of any crop. Tobacco ranked second and accounted for one-fourth of all crop receipts.

Livestock and products amounted to 45.7 percent of total cash receipts. Hogs, cattle and calves, and sheep and lambs decreased in receipts from 1980. Eggs showed the largest increase and sheep and lambs the greatest decrease. Dairy products made up 37 percent of total livestock receipts, the largest of any commodity with cattle and calves ranking second.

Prices Received by Tennessee farmers for crops were mostly below 1980 while livestock prices were mostly higher. The season average prices for soybeans, wheat, corn, cotton lint and cottonseed were below 1980 while prices for all hay, potatoes, sweetpotatoes and tobacco were higher. Cottonseed recorded the greatest price drop of any crop while tobacco showed the greatest price increase. Prices received by farmers for milk, milk cows, hogs, broilers and eggs averaged above 1980 while beef cattle, sheep and lamb prices were below 1980. Prices for eggs and hogs showed the greatest increase from 1980 for any livestock commodity while beef cattle and sheep prices showed the greatest decrease.

Crop Values totaled $1.19 billion in 1981, up 30 percent from 1980. Value of production for all 1981 crops except sweetpotatoes and cottonseed was above 1980. For most major crops, value increased as a result of increased production since prices were generally below 1980 levels. Tobacco, hay, oats and potatoes were the only major crops which showed an increase above 1980 in both price and production.

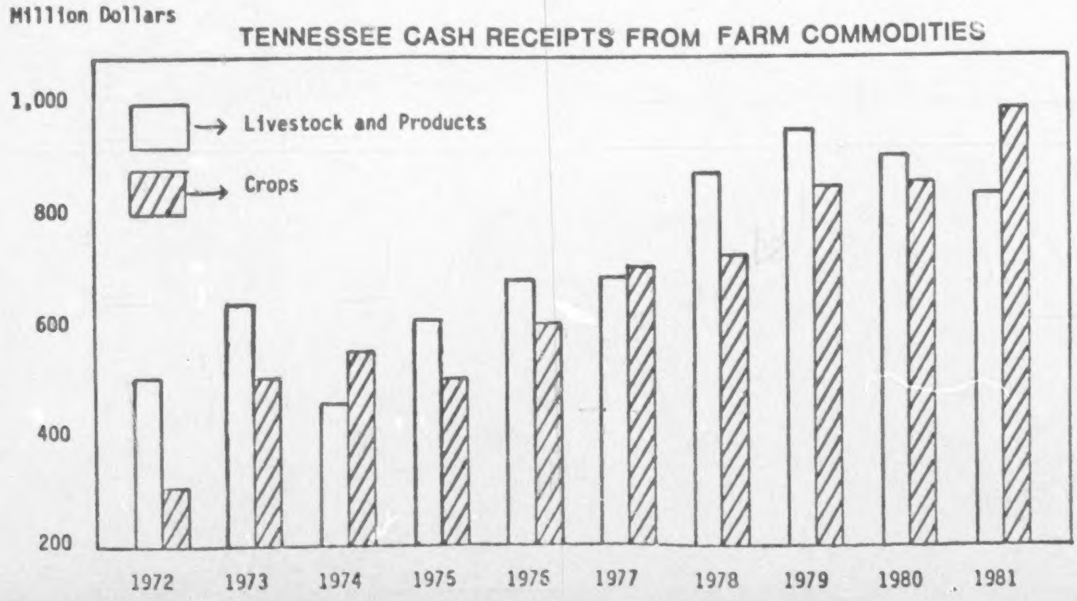
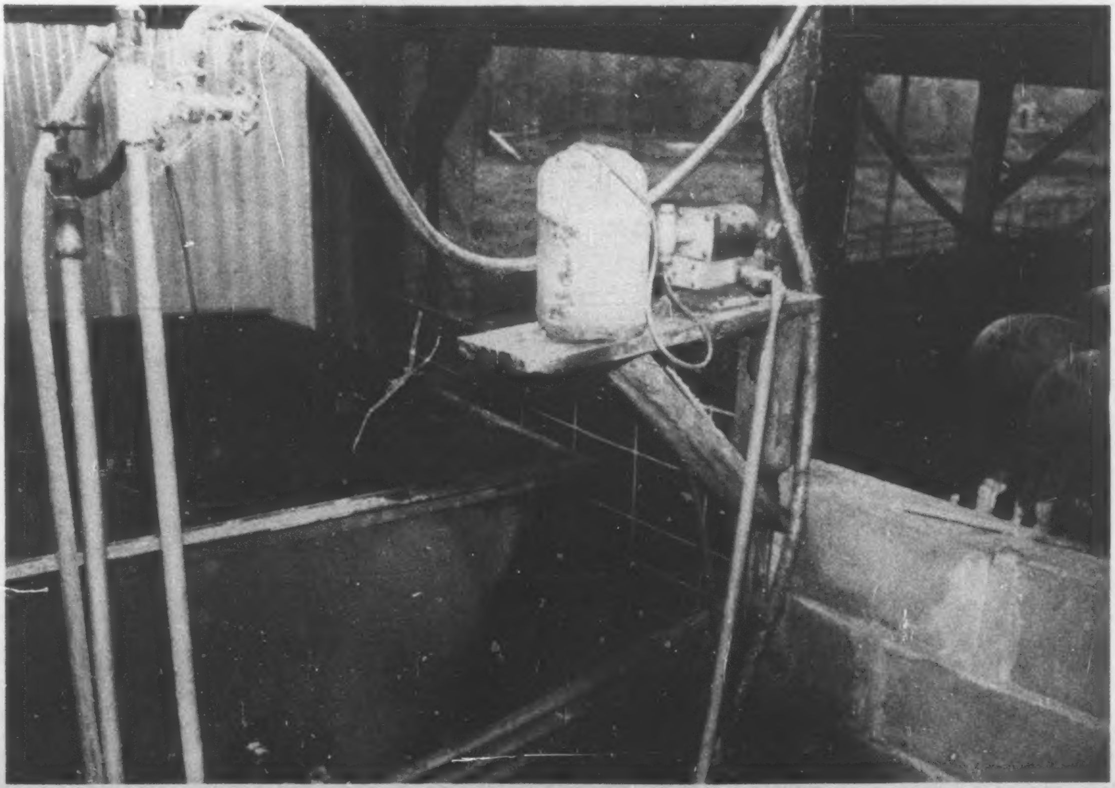
TENNESSEE CASH RECEIPTS FROM FARM COMMODITIES



COST OF PRODUCTION



FARM PRODUCTION EXPENSES

Tennessee's total farm production expenses totaled nearly $2.2 billion, up 10 percent from the previous year and 22 percent more than 1979's total. Of the total farm production expenses, farmers spent $1.4 billion on operating expenses, an increase of 8 percent from 1980. Feed and hired labor, which accounted for 25% of total farm operating expenses, were the only two items showing a decline from the previous year. The average farm operating expense per farm amounted to $14,855 compared with $13,654 in 1980. Averages per farm for expenses listed in the table below are derived by dividing expenses by number of farms as listed on page 87.

FARM EXPENSES: FARM PRODUCTION EXPENSES, TENNESSEE, 1975-81 1/

Year	Current Farm Operating Expenses

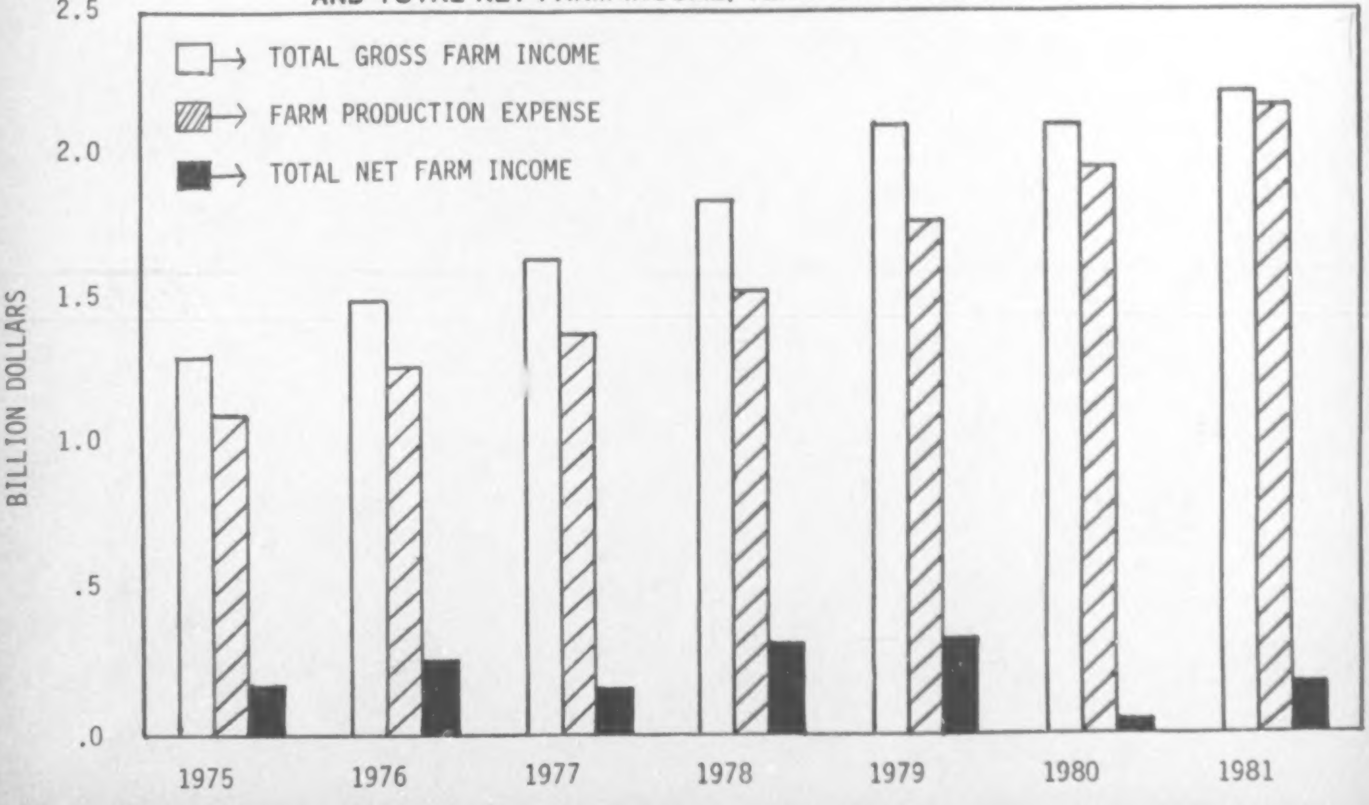
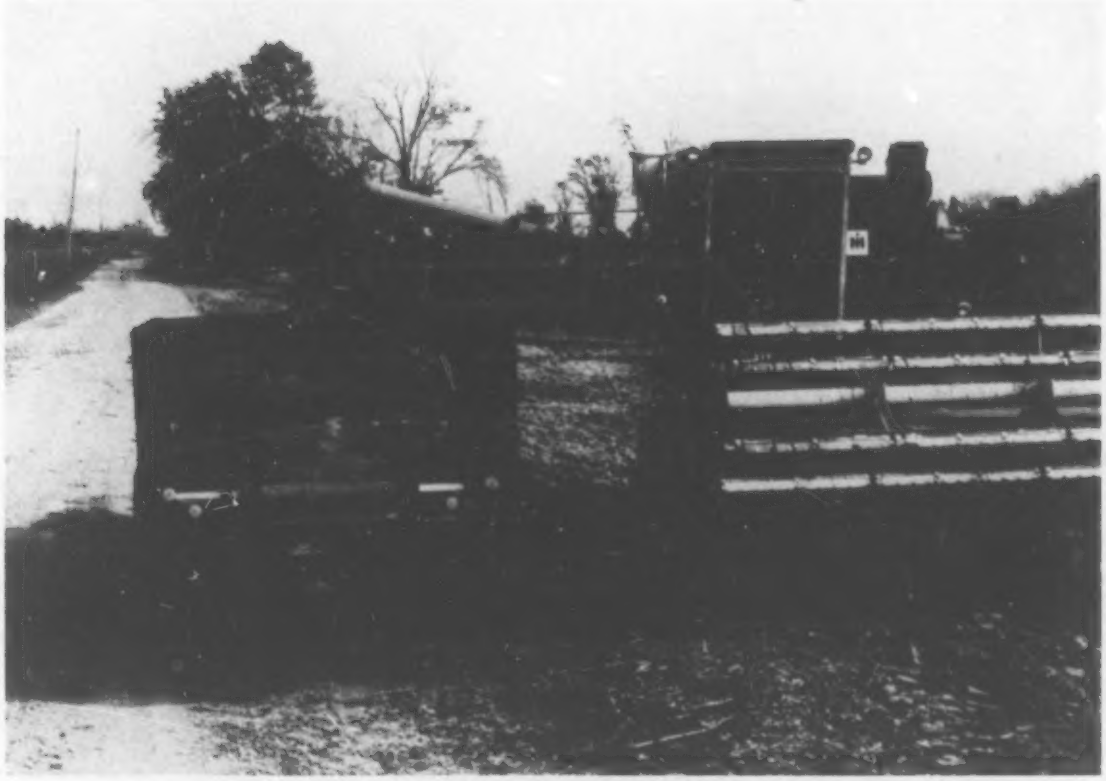
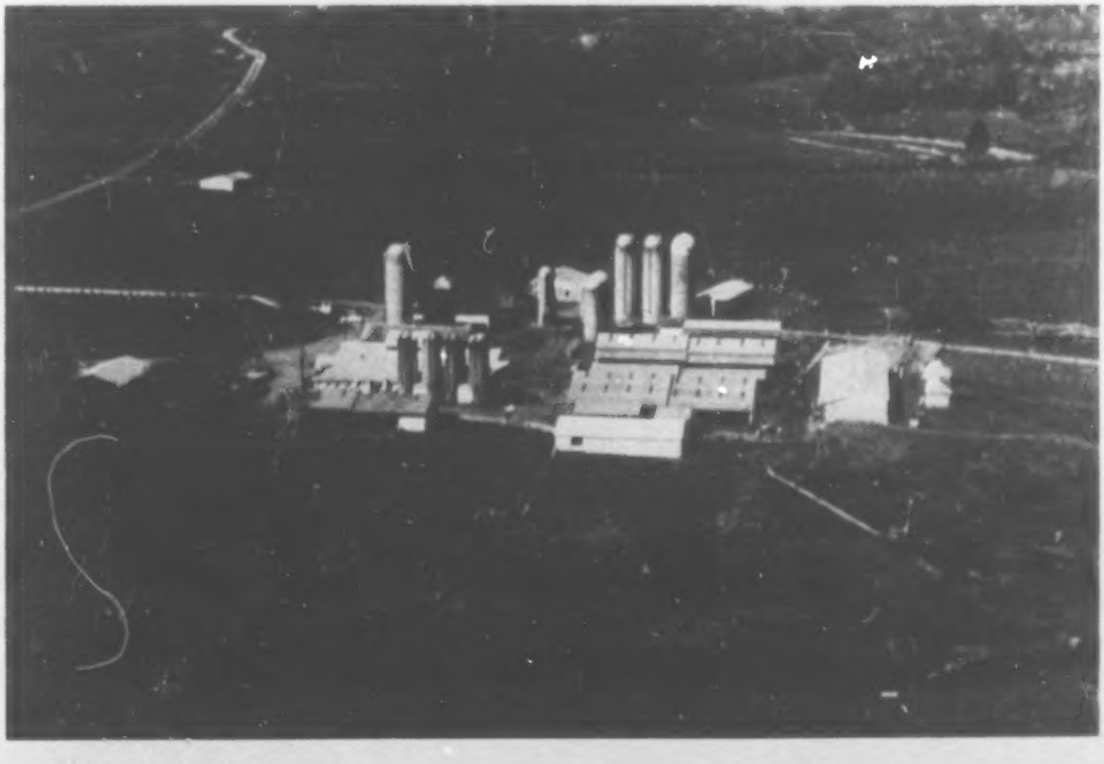
TOTAL GROSS FARM INCOME, FARM PRODUCTION EXPENSES, AND TOTAL NET FARM INCOME, TENNESSEE, 1975-81



MISCELLANEOUS





NUMBER OF FARMS

Since the late 1940's farm numbers have shown a rather steady decline. This trend began to level out in 1978 with only a slight decline in farm numbers during the last four years. The average size of Tennessee's farms also began to level out after many years of being on the increase. The total value of Tennessee's farms continues to increase with the 1981 value more than double that of 1975.

NUMBER OF FARMS AND VALUE PER ACRE, TENNESSEE, 1975-81 1/

Year	Number of Farms	Land in Farms	Average Size Farm
	Thousands	Thousand Acres	Acres
1975	106	14,000	132
1976	104	13,900	134
1977	102	13,800	135
1978	97	13,800	142
1979	96	13,700	143
1980	96	13,600	142
1981	95	13,500	142

1/ Includes only places having annual sales of agricultural products of $1,000 or more.

1/ Preliminary

FOREIGN AGRICULTURAL TRADE

Export markets provide a significant source of income for U.S. farmers. About one-third of all cultivated U.S. cropland is used to produce raw commodities for export. Production from 138 million acres was exported, equivalent to 2 out of every 5 acres harvested. Over one-half of U.S. wheat, rice, soybeans, sunflower seed, and cotton moved abroad. Between one-third and one-half of the coarse grain, tobacco, and some fruits and vegetables was sold in foreign countries. Agricultural exports generated jobs for approximately 1.2 million workers, two-fifths of whom were farmers.

The share of 1980 U.S. agricultural production exported during 1980/81 remained about the same as the share for the previous year. A slowdown in world economic growth dampened consumption and, subsequently, foreign demand for feedstuffs. Cotton and tobacco shipments were also adversely affected by the slowdown and high interest rates, with lower quality tobacco an additional factor.

AGRICULTURAL EXPORTS, TENNESSEE AND THE U.S. 1980 AND 1981 1/
